Dear Hiring Managers (or fellow Developers),

Hello, I'm Saad Koker, a Computer Science student at Western University with a strong background in software development. My primary expertise lies in back-end development, particularly using Java, though I am also proficient in Python, C++, and Swift. My passion for technology extends beyond academics; I'm always eager to explore new challenges and innovative solutions.

Throughout my academic journey and professional experiences, I have a solid track record creating intuitive, efficient software solutions. For example, I developed Tacticl, an iOS application designed to streamline task management and optimize travel routes for sales teams, significantly improving their daily efficiency. I've also developed ExposeBot, a custom-built Discord bot designed to automate engagement and foster interactive communities by integrating AI-driven tools, gamified experiences, and dynamic moderation features, significantly enhancing user interaction and community activity within a server.

My commitment to continuous learning drives me to stay updated with emerging technologies and industry trends. Outside of coding, I'm particularly interested in audio engineering and PC hardware, which complement my technical skills by fostering a well-rounded approach to problem-solving and innovation.

Feel free to reach out if you're interested in collaborating, discussing technology, or exploring new project ideas. I'd love to connect and chat!

Sincerely,

Saad Koker
